

India's Biological Diversity

A Photographic exhibition of India's Wildlife

Kalyan Varma is one of India's leading wildlife photographers. Although he started his career in the IT sector, his passion for nature and wildlife made him leave this behind so that he could devote his time and effort to nature photography. A winner of the Sanctuary Asia Wildlife Photographer of the Year award, Kalyan's photos, blogs, workshops, and field efforts have made him a well-known name in wildlife conservation circles. His work has appeared in many international magazines like National Geographic, BBC Wildlife, Wildlife Conservation, Sanctuary Asia, etc.

India is home to more than a billion people, but it still supports an amazing diversity of wildlife and natural habitats and resources. Four regions within India have been recognised among the 34 biodiversity hotspots in the world. These regions are known for their spectacularly rich diversity of wild species of plants and animals, most of which are rare, restricted, and endemic in their distribution and occurrences. Come see a visual portfolio of these hotspots – wildlife, landscapes, and its people.

Dates : 8 – 11 November 2008
